Weight LFTall Profile Bottom (RB305)	17.5 lbs.	17.5 lbs.
Weight LF Short Profile Top Rail (RT501)	9.5 lbs.	9.5 lbs.
Weight LF Short Profile Bottom Rail (RB505)	13 lbs.	13 lbs.

Customers are responsible for local code adherence.

¹ 4" Sphere Code spacing requires that a 4" ball cannot fit through any spacing between balusters.

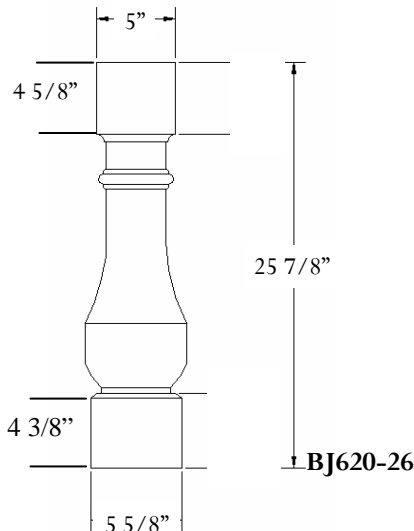

² Common [non-code] spacing can be used in non-access applications or when spacing codes are not required.

³ Building codes for residential installations of balusters are typically specified at 36" in height.

CODE & HEIGHT CONSIDERATIONS

In some locales the Residential Building Code may require a balustrade height of greater than 36". In these instances the Extended height balusters and Newel Posts may be necessary.

It is the customer's responsibility to determine and meet all applicable building codes.

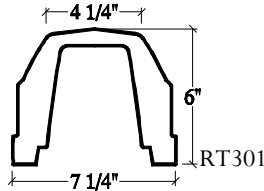

SHORT PROFILE RAIL OPTION

Jefferson Extended Balusters with the Short Profile Top Rail (RT-501) and the Short Profile Bottom Rail (RB-505) will meet most residential height requirements.

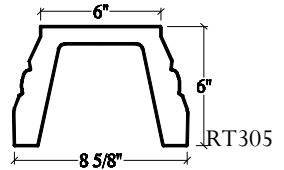

*** Short Profile Railings will NOT meet Residential Code height of 36" unless used with Jefferson Extended Balusters.**
